LOCATOR XD 2.5 GHz

The Electronically Aided Physical Search Component

This is the latest version of the Locator series of Non Linear Junction Detectors. It transmits at 2.5 GHz for improved detection range of modern miniature components, **GSM technology in particular**. In addition to third harmonic discrimination of false / true targets the display is a colour touch screen. There is a Red Green true / false heads up inductor in the search head. The specification is as follows:

- 4 watt output power
- Automatic DSP power control
- Automatic frequency selection
- Single scroll wheel for major functions
- Differential audio tones for Electronic and Corrosive evaluation
- Carbon fibre integral extending arm
- Quick fit lithium-ion battery with fuel gauge
